

## Ed Randolph Partner

Mr. Randolph has been a leader in developing and overseeing California's energy policy for more than 25 years. Having served as Deputy Executive Director for Energy and Climate Policy at the California Public Utilities Commission and chief policy advisor to the California Assembly's Utility and Commerce Committee, Mr. Randolph has been directly involved in shaping almost every energy policy initiative in California over the past two decades.

Mr. Randolph has been responsible for providing strategic guidance on public policies and issues that help make California a national and international leader in energy-related initiatives. This includes policies driving California's aggressive renewable power investments, energy efficiency overhauls, and moving the state to integrated resource planning with a focus on GHG emissions. He also negotiated and drafted a major rewrite of California's cable statutes to overhaul regulation of cable television and data services in California.

Mr. Randolph has also led efforts to rapidly deploy new clean energy resources to meet California clean energy goals and respond to planned and unplanned loss of critical infrastructure. The effort led California to an electricity portfolio that is more than 65% carbon free today and on track to be 85% carbon free by 2031.

Mr. Randolph earned a Bachelor of Arts in Political Science from the University of California, San Diego, and a Juris Doctorate from the McGeorge School of Law, where he graduated with Great Distinction.
